AI RESUME BUILDER

- Intern Name: **Dipali Brahmbhatt**
- College Name: **Gyanmanjary Education Mahuva (GMIU)**
- Course & Semester: **Diplo in Computer Engineering - 6th sem**
- Internship Company: **Majecurious**
- Mentor Name: **Shiyal Sanjay Sir**
- Faculty Guide: **Anil Gujariya**

Introduction

- AI Resume Builder is a full stack web application.
- The project helps users create professional and ATS-friendly resumes.
- Users can generate resume content using AI.
- The application provides a simple and beginner-friendly workflow.
- Users can edit and download resumes in PDF format.

Problem Statement

- Many students and freshers struggle with resume writing.
- Users are unfamiliar with ATS-friendly resume formats.
- Writing professional summaries and descriptions is difficult.
- Manual resume creation is time-consuming.
- Beginners often do not know proper resume structure.

Objectives

- Build a full stack AI-powered resume builder.
- Generate structured resume content using AI.
- Provide editable resume sections.
- Allow users to preview and download resumes.
- Learn frontend, backend, database, and AI integration concepts.

Technology Stack

Frontend

- React.js
- Tailwind CSS

Backend

- Node.js
- Express.js

Database & Authentication

- Supabase

AI Integration

- Google Gemini API

System Flow

1. User logs in or signs up.
2. User creates a new resume.
3. User enters complete details in a single prompt.
4. AI processes the input.
5. Structured resume is generated.
6. User edits the resume.
7. User previews and downloads PDF.

System Architecture

React Frontend

↓

Supabase Database & Authentication

↓

Node.js + Express Backend

↓

Google Gemini API

Key Features

- User Authentication
- AI Resume Generation
- Editable Resume Sections
- Resume Preview
- Multiple Resume Templates
- PDF Download
- Responsive UI Design

Database Design

Profiles Table

- id
- name
- email
- created_at

Resumes Table

- id
- user_id
- title
- raw_input
- personal_info
- summary
- experience
- education
- skills
- projects
- template
- ai_generated
- created_at
- updated_a

API Overview

Authentication

- Supabase Auth used for login and signup.

AI Resume Parsing API

POST: https://ai-resume-builder-16vp.onrender.com/parse-resume

Resume CRUD

- Managed using Supabase client library.

AI Integration

- Google Gemini API is used for AI processing.
- User enters resume details in one paragraph.
- Backend sends data to Gemini API.
- AI generates structured resume content.

- **Generated content includes:**
    - Summary
    - Skills
    - Education
    - Experience

Testing

- The project was tested manually using live usage testing.
- Testing Included:
- Authentication Testing
- Resume Generation Testing
- Responsive UI Testing
- PDF Download Testing
- CRUD Operation Testing

Deployment

Frontend

- Netlify

Backend

- Render

Database & Authentication

- Supabase

Live Demo

ai-resume-bolt.netlify.app

Future Enhancements

- More resume templates
- Resume score analysis
- Cover letter generation
- Export in multiple formats

Conclusion

- AI Resume Builder provides a simple and efficient resume creation process.
- The project demonstrates full stack development and AI integration.
- Users can quickly create ATS-friendly resumes.
- The project improved practical knowledge of React, backend APIs, databases, and AI tools.

THANK YOU
